
Raw and corrected positions/widths coincide; root peak switching is not a unique resonance shift.

Narrow scans; $\Omega_0/2\pi \geq 1$ MHz. $\Gamma_{T_2} = 1/(\pi T_2) = 43.54$ kHz; $T_2 = 7.31$ μs.

*Provisional saved-matrix correction; classifier match unverified. Direct extraction; no uncertainty bars.
