Does improvement survive matching pulse area?
Same simulations, horizontal coordinate scaled by unsigned I-area; comparison only within overlapping ranges
Base cutoff 0.001
Base cutoff 0.003
Base cutoff 0.005
Hard endpoints
1 µs ramps
3 µs ramps
6 µs ramps
Polynomial window
Dip FWHM (kHz)
Ideal contrast SNR · 1000 shots
Hard-pulse amplitude with equal unsigned I-area (MHz)
